JAFORD · Technical profile

Catalyst-coated substrates (CCS)

Catalyst-coated substrates (CCS)

Catalyst-coated substrates place the catalyst layer on a selected support for electrode development. Support selection and coating design are matched to the reaction and cell architecture.

Catalog information

Type	Catalyst-coated substrates (CCS)
Application / scope	Catalyst-coated substrates place the catalyst layer on a selected support for electrode development. Support selection and coating design are matched to the reaction and cell architecture.

Reference specification

Published reference information, not JAFORD batch measurements or guaranteed acceptance limits. Analog specifications do not establish the formulation or performance of a different model.

Published substrate example	Catalyst-coated gas diffusion electrode
