JAFORD · Technical profile

Electrocatalysts

Electrocatalysts

Electrocatalysis materials for hydrogen evolution, oxygen evolution and carbon-dioxide reduction research. Composition and form are selected around the reaction and experimental setup.

Catalog information

Type	Electrocatalysts
Application / scope	Electrocatalysis materials for hydrogen evolution, oxygen evolution and carbon-dioxide reduction research. Composition and form are selected around the reaction and experimental setup.

Reference specification

Published reference information, not JAFORD batch measurements or guaranteed acceptance limits. Analog specifications do not establish the formulation or performance of a different model.

Reference range	Catalysts for fuel-cell and electrolyzer components
