JAFORD · Technical profile

Gas diffusion layers

Gas diffusion layers

Porous gas diffusion materials for reactant transport and electrical contact in electrochemical cells. Substrate and surface treatment are selected for the intended electrode and cell design.

Catalog information

Type	Gas diffusion layers
Application / scope	Porous gas diffusion materials for reactant transport and electrical contact in electrochemical cells. Substrate and surface treatment are selected for the intended electrode and cell design.

Reference specification

Published reference information, not JAFORD batch measurements or guaranteed acceptance limits. Analog specifications do not establish the formulation or performance of a different model.

Reference grade	Sigracet 28 BC
Reference substrate	Carbon paper with microporous layer
Reference thickness	235 micrometres
Reference PTFE treatment	5 wt%
