JAFORD · Technical profile

Membrane electrode assemblies (MEA)

Membrane electrode assemblies (MEA)

Membrane electrode assemblies bring the membrane and electrode layers together for fuel-cell or water-electrolysis development. The assembly configuration is matched to the selected chemistry and cell design.

Catalog information

Type	Membrane electrode assemblies (MEA)
Application / scope	Membrane electrode assemblies bring the membrane and electrode layers together for fuel-cell or water-electrolysis development. The assembly configuration is matched to the selected chemistry and cell design.

Reference specification

Published reference information, not JAFORD batch measurements or guaranteed acceptance limits. Analog specifications do not establish the formulation or performance of a different model.

Published assembly examples	5-layer and 7-layer membrane electrode assemblies
