JAFORD · Technical profile

Membranes

Membranes

Ion-exchange membranes for fuel-cell and water-electrolysis research. Material selection depends on the electrochemical system and intended operating conditions.

Catalog information

Type	Membranes
Application / scope	Ion-exchange membranes for fuel-cell and water-electrolysis research. Material selection depends on the electrochemical system and intended operating conditions.

Reference specification

Published reference information, not JAFORD batch measurements or guaranteed acceptance limits. Analog specifications do not establish the formulation or performance of a different model.

Reference type	Nafion NR212 solution-cast PFSA membrane
Reference thickness	50 micrometres
