JAFORD · Technical profile

Battery testing

Battery testing

We connect lithium-ion, solid-state and pouch-cell development with cycling, rate and comparative testing to validate performance as your technology moves into larger cell formats.

Catalog information

Type	Battery testing
Application / scope	We connect lithium-ion, solid-state and pouch-cell development with cycling, rate and comparative testing to validate performance as your technology moves into larger cell formats.

Development / testing scope

Lithium-ion, solid-state and pouch cell testing, with fixtures and safety requirements reviewed for each cell format.

Test protocol review and test coordination with partner laboratories.

Material characterization coordinated where the project requires it.

Catalog facts: owner-supplied JAFORD product and capability brief. A technical profile is not a batch certificate, safety data sheet or measured performance report.
