JAFORD · Technical profile

Material characterization

Material characterization

Connect your material development with TEM, SEM, XPS, XRD, FTIR, Raman, NMR, BET surface-area analysis and thermal analysis through specialist laboratories. Methods are selected for each project to understand morphology, structure, composition and material behavior as you validate samples and scale your process.

Catalog information

Type	Material characterization
Application / scope	Connect your material development with TEM, SEM, XPS, XRD, FTIR, Raman, NMR, BET surface-area analysis and thermal analysis through specialist laboratories. Methods are selected for each project to understand morphology, structure, composition and material behavior as you validate samples and scale your process.

Development / testing scope

SEM and TEM imaging to examine surface morphology and microstructure, subject to sample and method assessment.

Review of the material, characterization objective and suitable test methods.

Coordination of the agreed measurements and reporting scope.

Catalog facts: owner-supplied JAFORD product and capability brief. A technical profile is not a batch certificate, safety data sheet or measured performance report.
