JAFORD · Technical profile

Pouch-cell customization

Pouch-cell customization

We connect electrode processing, cell assembly and testing expertise to advance your coin-cell results into pouch-cell prototypes and validate the technology before the next step toward pack-level development.

Catalog information

Type	Pouch-cell customization
Application / scope	We connect electrode processing, cell assembly and testing expertise to advance your coin-cell results into pouch-cell prototypes and validate the technology before the next step toward pack-level development.

Development / testing scope

Cathode / anode matching and stacked-cell assembly.

Dry-cell delivery, or electrolyte filling, formation and capacity grading.

Catalog facts: owner-supplied JAFORD product and capability brief. A technical profile is not a batch certificate, safety data sheet or measured performance report.
