Wind & solar direct-coupling tests

Wind & solar direct-coupling tests

We bring together electrolysis and power-system expertise to assess wind and solar coupling and validate operation under variable renewable power, matching the test setup to your technology.

Catalog information

Type	Wind & solar direct-coupling tests
Application / scope	We bring together electrolysis and power-system expertise to assess wind and solar coupling and validate operation under variable renewable power, matching the test setup to your technology.

Development / testing scope

Review of the proposed power source, electrical interfaces and electrolysis configuration.

Coordination of variable-power operation and direct-coupling validation where facilities and interfaces are compatible.

Catalog facts: owner-supplied JAFORD product and capability brief. A technical profile is not a batch certificate, safety data sheet or measured performance report.
